

Release Plan - UCSC Interactive Map

High level goals:

- Make android app with map interface with descriptions of cool places around campus
- Let users add spots
- Let users rate spots
- Let users add comments
- Add pictures and descriptions
- Add moderation tools so users can specify junk
- Add categories

User stories for release:

Sprint 1:

1. As a new student, I would like to find points of interest on and around campus
2. As an international/new student I want to be able to explore the local stuff
3. As a tester I want documentation so that I can fix potential errors
4. As a student I want my voice heard / want others to discover the places I like / I would like to share my stories
5. As a student I want an actual description of the place that i might visit and I want other peoples opinions

Sprint 2:

1. As a student, I would like to be able to easily find my classes so that I can get around better
2. As a student I want relevant content, as to not waste time on digging through "spam"
3. As a regular chiller, I want to know all the good "chill spots" (category pins!)

Sprint 3:

1. As a current student, I want to not have to give people directions to new places
2. As an instructor, I want my students to be on time to lectures so that my class will run smoothly
3. As a potential user, I want to be able to find the app so that I may use it.
4. As a moderator I want tools to be able to easily delete offensive material
5. As a developer I want to put something cool on the market
6. As a potential user, I want an app that is continuously useful so that I will retain it on my phone

Product Backlog

We discussed integrating Facebook accounts, and accounts in general, and adding the service to multiple platforms, but nothing that we discussed in length was stucken from the project plans, it was just given a lower priority.
